To: Noise Regulation

Subject: Submission to review of delivery drone noise

Sensitivity: Normal

\f0Dear Sr, Madam,

\f0
\f0In your review may I ask you to consider the following points:

- \f0
- Noise levels in suburban neighbourhoods are already high. The noise comes from mowers, grass cutters, leaf blowers, chain saws, cars and trucks, building/renovation noise etc. There seems to be no limit to noisy tools, and with prices getting lower all the time every Tom, Dick and Harry can and will buy them.
 - Adding another source of noise and arguing the noise level is equivalent to... Or not worse than... Is simplistic and makes an already bad situation worse.
 - The right approach would be to limit noisy implements and drones to certain hours of the day, say 10-12am and maybe 3-5pm. Or impose strict dB limits to ALL noisy devices. After all, more than a few people DO shift work.
 - The noise problem is one that needed addressing a long time ago. It's just another form of pollution. Any government that cares for people would have done something by now. I urge you not to impose another layer of noise on residents just to maximise profits of a few companies. Electric delivery trucks would be the option of choice, not noisy drones criss-crossing the skies!

\f0
\f0I trust that this submission will be considered and I look forward to your acknowledgement and feedback.

\f0
\f0Yours sincerely,

\f0
\f0Michael Qualmann
