Subject: Noise Regulation Review for Remotely Piloted Aircraft (RPA) and Specialised Aircraft

Sensitivity: Normal

Dear Sir / Madam,

Our modern lives are already bombarded with noise from many sources, we do not need any more. I urge the department to implement a ban on drone use in and around suburban areas.

In addition to the noise, drones are an intrusion of privacy as they will have cameras and other sensate equipment that will be able to intrude on peoples homes. This idea is particularly chilling considering the parties involved in the project.

With respect to noise, we are finally reaching a point with technology whereby we could reduce the noise in our communities. This could be achieved through the use of battery powered lawn and garden equipment and electric cars. This would result in a significant improvement in quality of life for many people.

So again, I believe we should not allow drone deliveries to become a the latest 'thing' foisted on us by big tech.

Regards

Derek
