Dear NASAG Members,

Many thanks for your participation at the latest NASAG meeting. Please find attached the draft meeting record and an updated actions arising table.

Land Use Planning Principles and Guidelines for Development in the Vicinity Of Airports

Following on from discussion at NASAG, the principles document has now been amended to reflect the full suite of guidelines which are being developed as part of the safeguarding framework. The guidelines document has also been amended to improve the distinction between brownfield and greenfield development considerations.

In discussing the draft principles and guidance material at NASAG a number of suggestions were made concerning how these documents could be further developed. The suggestion was made that additional principles could be included to consider noise impacts on new developments (e.g. urban consolidation and protection of undeveloped corridors). It was also suggested that further introductory and contextual information be included in order to provide planners with further guidance regarding how the documents should be used. I would like to invite Members to provide some suggested text to satisfy the concerns which were raised at the meeting. As a suggestion, the contextual information could be incorporated in the principles document on p.4 at the end of the third paragraph.

Please contact myself, Adam Sutherland (adam.sutherland@infrastructure.gov.au, 02 6274 6959) or Scott Stone (scott.stone@infrastructure.gov.au, 02 6274 7605) should you have any queries. Your response by Friday 14 October 2011 would be appreciated.

Regards,

Nicole Talbot
