

Electromagnetic energy. Researched. Regulated. Safe.

Electromagnetic energy (EME) is one of the most heavily studied types of energy in the world. Decades of research shows that there are no known health risks related to EME from wireless communications, like Wi-Fi or 5G.

Every mobile tower is required by law to comply with safe exposure limits for EME emissions set to protect the health of all Australians. Find out how Australia researches, regulates and keeps EME from telecommunications safe at eme.gov.au
