Jarod Rowe

All for ADSB and the full functionality for safe flying but it's not going to happen without WAAS as an SBAS. Where is it? Has been promised since 2020 and COVID was used as the excuse for the delayed rollout, now whenever I follow it up CASA says it's up to AirServices and AirServices says it's up to CASA. We have such a huge safety benefit to be had here and it's been sat on for the last five years! The satellite is already up there and the marine services are already taking advantage of it, as always behind the rest of the world in embracing technological advances in aviation.
