Matt Loveday

ADS-B provides an additional level of safety to the irreplaceable see and avoid responsibilities of all pilots of crewed and non-crewed aircraft. As a stakeholder in both parties, I believe that ADS-B out capability in RPAS would provide the next level of situational awareness to crewed operators carrying ADS-B in equipment, which is the missing piece of the puzzle, with the majority of prosumer / enterprise grade RPAS already incorporating smart ADS-B in capability.
