The use of these technologies is not practical for the Hang Gliding community.

We do not have:

- a) the power systems to run these devices.
- b) the space to mount or utilise these devices.
- c) the cost of purchasing, and maintaining these devices put the sport in itself in jeopardy due to diminishing numbers. These are contributed recently to convenience, cost and ongoing fees.
- d) the installation and removal needed each flight as the glider is packed away for transport.

The nature of Hang Gliding is based around a minimalistic approach to flight. Electronic monitoring flight systems are not viable on a Hang Glider.
