## Dane Evans

For paragliding and similar aircraft, paramotors, hang gliders and weight shift micro lights this mandate would be impractical at best. Drastically increasing barriers to entry, and running directly counter to previous requirements.

- ADSB devices start from around \$1300 - that's about 20% of the current outlay for a complete second hand setup.
- limited space and weight capacity for more devices
- the requirements for PG2 &3 strongly recommend against carrying and using instruments. This would be adding another.
- we often fly in close proximity, and have limited speed and manoeuvrability, ADSB In will have little to no benefit.
