Short comment

Power supply - Why are the existing solar powered towers not being used to run the proposed new 'landline' systems? Surely we can reuse and recycle? Rural power is not reliable. It is a huge cost to the property owner to provide acceptable power to the new system if none exists already. We are not mapped for mobile coverage and I need a reliable landline to call 000 for any emergency with our staff and family. The radio phone continues to work when the electrical power supply is lost due to storms and bushfires, a regular occurrence in Central Queensland. Our radio phone system has been a reliable connection to the outside world. The technology works and surely can be adapted for continued use.
