

Consultation name: Updated fire control laws for Norfolk Island

Comment:

We oppose having to have a permit to burn green waste after clearing land. Which ever way you look at it the cost will skyrocket for the customer to which the costs will be passed. Not only the permit costs but also costs of staffing someone to stand and watch it until it burns out. Either that or they will pay for the waste to be carried to the Waste Management Centre. I know you are under-estimating the green waste stream that will increase enormously with this change of law.
