

### On Farm Connectivity Program Round 3 – Public Consultation

As a small company making a big difference to farmers with a genuine electronic sustainable computerised antennae driven frequency water technology. Hydrosmart is capable of delivering great impacts to Australians on the land with bores that have saline or hard mineralised water, we were approved last round.

By the time we were informed the funding door for applications had opened it was already used up inside of 24 hours and shut off again so that no client whom we had begun speaking with about the funding could access the govt portal due to almost immediate closure. This was somewhat alarming and seemed the large organisations had employees that had 'squatted' grant funds and absorbed the space so fast no others had any chance.

If a fair chance can be provided the like of our company to work with our national focus on farm sustainability and quality of poor water improvements it would be appreciated by both us and the farmers
