Short comment

" at least 25 Mbps, and upload speed of at least 5 Mbps." That's a joke. Those speeds are only at night around 4 am. The speed supplied by Telstra by way of sim card wifi or prepaid mobile during the day is lucky to reach a tenth of those speeds. Outside major cities or towns we get charged for internet at the city rates and yet our reception is poor or even worse to the point where it's difficult to go page to page. Speed tests take 4 to 8 minutes to load the page let alone do the test. It does not occur on one device it's every device in your house. I have a pre paid phone for work and the usual post paid mobile and wifi, tablets etc with their own sim cards and all are the same when it comes to speeds. low to lower at certain times of the day. So why should I pay full price for a service my provider Telstra cannot supply?
