### Short comment

My sister lives as young person in aged care, in the inner city; fewer than 4 kms from the Brisbane City centre and the connection for her mobile devices is near non existent. We have purchased a \$500 (plus call plan) falls notification phone/watch but it does not connect at all or so intermittently that it is useless. This lack of connectivity makes it difficult to contact her on her phone even. This is a new development of only a few years old and many, many hundreds of units are being built all around the facility and wonder how much worse it would get. She has a right to feeling safe and we have a right to use available technologies to monitor and record her falls but this is not possible. This watch now sits unused as it is so unreliably connecting to even 3G. And just a mention that your 'Private Submission' question above is bad English and makes no sense.
