### Short comment

The legislation is needed for the country, especially in remote areas where coverage can't reach, this could also help with triple-0 calls as if a carrier has an outage (and they are the only land carrier in the region) it will help to provide access to everyone making sure that everyone can get assistance when needed. Also land Coverage via the main carriers for example Telstra Wholesale, needs to start giving access to the full Telstra Network 99.7% of Aus population compared to Wholesales 98.8% of Coverage to make sure customers of MVNO's on the Telstra network are able to stay connected using the full Land network and only using Satelite when needed!! It should also be made to not increase prices of Mobile plans on the three carriers due to having this legislation. Overall this legislation is needed as many Australians are now swiching from Home Phones (meaning not many are taking advantage of Universial Service Obligation) and switching to Mobiles, though this, this will help keep everyone safe while using the existing 4/5G networks.
