Comment: Could the policy review consider the following for Ayers Rock Airport:

The risk assessment include as a factor Narrow Runway Operations – all RPT services are domestic jet operations of which more than half are conducted as Narrow Runway Operations in code 4C aircraft.

The risk assessment in addition to including the factor of the presence of air traffic control include the presence of CA/GRS – a CASA risk assessment led to the establishment of CA/GRS.

All RPT domestic jet operations are conducted by the major airlines who may be able and amenable to cover the cost of maintaining the status quo.

It is thought that RPT flights on average carry at least 50% international passengers.

Please note, Voyages Indigenous Tourism Australia Pty Ltd (the Airport operator) may add to or amend the above by close of submission.
