Comment: Increasing exposure to noise, especially from traffic, aircraft, low-frequency amplification and now drones, is a serious quality-of-life issue for many people, including myself. It is impossible to effectively insulate or protect oneself from the intrusive and disruptive effects of such vehicles, machinery and devices. Because unreasonable noise is invisible it often escapes appropriate regulation, despite its capacity to make people's life an absolute misery. I would urge the government to anticipate the anguish that drone noise may cause, as well as the impacts of drones on birds and other wildlife, and protect the public from this new scourge before it becomes a major problem.
