Subject: Submission to noise regulation review [SEC=UNCLASSIFIED]

Sensitivity: Normal

Comment: Training flights have no place continuously roaring with increasing frequency over residential areas like Parafield airport. The noise continuous day after day, hour after hour inducing psychological stress and physical health issues. There is also the pollution of unleaded av fuel.

Drones for urban delivery for profit are set to introduce trespass noise continuously with the same health effects as above.

Peace and health of urban residents is placed below that of avaricious profiteers. This should be thoroughly investigated before any implementation.

Both Parafield training flights and drone dB levels far exceed EPA levels set at 62dB for industrial noise level allowed in residential areas and exceed those by the WHO at even lower levels. There IS a reason why the EPA and WHO levels have been capped where they, is there not?
