**Abstract**

This report tabulates day-to-day travel of Australians in 1985-86.

The number of trips, the distance travelled and the time spent travelling were classified by mode of travel, sex of the tripmaker and several other factors. These factors are demographic (age group, education, country of birth, employment status, licensed car drivers and licensed motor cyclists), time (time of day, day of week, season, holiday/non-holiday), geographical (State/Territory, capital city/rest of State, sampled region), and trip characteristics (Trip purpose, distance, duration and start time).

The source of the data is the Survey of Day-to-Day Travel in Australia 1985-86

---

**Keywords**

Daily travel; risk exposure; travel; travel survey; trip characteristics

**NOTES:**

- (1) FORS Research reports are disseminated in the interests of information exchange.
- (2) The views expressed are those of the author(s) and do not necessarily represent those of the Commonwealth Government.
- (3) The Federal Office of Road Safety publishes two series of research report
  - (a) reports generated as a result of research done within the FORS are published in the OR series;
  - (b) reports of research conducted by other organisations on behalf of the FORS are published in the CR series.

STATISTICAL DATA ANALYSTS

Day-to-day travel in Australia 1985-86

INTSTAT Australia Pty Ltd  
February 1988

## SUMMARY

This report summarises day-to-day travel of Australians in 1985-86. The data are from the Survey of Day-to-Day Travel in Australia 1985-86, a geographically stratified, random sample of households throughout Australia. For a randomly chosen day in the year-long survey period, details of all trips made by all members of the selected household were collected on a self-completion, mail questionnaire. The final data set contains details of 145 000 trips of 45 000 persons from 18 000 households.

The number of trips, the distance travelled and the time spent travelling are classified by mode of travel, sex of the tripmaker and demographic, temporal, geographical and trip characteristic factors. These travel measures are tabulated per person and for the whole of Australia on a per day basis.

The demographic factors are age group (with particular emphasis on ages 16 to 25), highest educational level attained, country of birth and employment status. The age group tables are also given for licensed car drivers and licensed motor cyclists. (Section 2)

The temporal factors are time of day (by four hourly time periods), day of the week, season and holiday/non-holiday periods. (Section 3)

The geographical factors are State or Territory, capital city, rest of State or Territory (excluding the capital city) and sampled region of the original survey. (Section 4)

The trip characteristics tabulated are trip purpose, distance, duration and start times. (Section 5)

Further detail by age group and time of day is given for travel by car as a driver and as a passenger, by motor cycle, as a pedestrian, and by bicycle. (Section 6)

An appendix explains the weights required to be applied to the data base of the original survey to produce the estimates tabulated in this report.

## Appendix Explanation of weights used to create the tables

## 1. Introduction and overview

This report summarises day-to-day travel of Australians in 1985-86.

The number of trips, the distance travelled and the time spent travelling are classified by mode of travel, sex of the tripmaker and several other factors. These factors are: demographic (Section 2; age group, education, country of birth, employment status, licensed car drivers and licensed motor cyclists), time (Section 3; time of day, day of the week, season and holiday/non-holiday periods), geographical (Section 4; State or Territory, capital city, rest of State or Territory and sampled region), and trip characteristics (Section 5; trip purpose, distance, duration and start times). Further detail by age group and time of day is shown for several travel modes in Section 6. The number of trips, the distance travelled and the time spent travelling are tabulated per person and for the whole of Australia on a per day basis. Graphs for these quantities per person are also given.

The source of the data is the Survey of Day-to-Day Travel in Australia 1985-86. This survey was of a geographically stratified, random sample of households throughout Australia. For a randomly chosen day in the year-long survey period, details of all trips made by all members of the selected household were collected on a self-completion, mail questionnaire. The final data set contains details of 145 000 trips of 45 000 persons from 18 000 households. This survey is documented in two previous reports (SOCIALDATA, 1987; INTSTAT, 1987).

Except for Section 4.4 (for sampled region), the weights used were those for the whole of Australia. These weights are the second set of weights derived in the report, 'Review of exposure data base from the Survey of Day-to-Day Travel in Australia' (INTSTAT, 1987). They ensure that the weighted number of respondents, classified by sex, age group (9-14, 15-29, 30-49, 50-64, 65+) and capital city/rest of State within each State or Territory, agree with such a tabulation for Australia at the 1981 Population Census.

For most sets of tables, the weight for the total number of trips table (the d tables in each section) was PWEIGHT2 from INTSTAT (1987). For the total distance travelled (the e tables), the weight was PWEIGHT2 multiplied by the distance of each trip, while for the total time spent travelling (the f tables), the weight was PWEIGHT2 multiplied by the time of each trip. These weights yield 'totals in Australia per day' estimates. For these tables, the estimates are rounded to the nearest hundred trips, thousand kilometres and hundred hours, as appropriate. Complete specifications of the weights used are in the Appendix.

The corresponding 'per person per day' estimates were derived by dividing the unrounded total estimates by the estimated number of persons. The average number of trips per person per day (the a tables in each section), the average distance travelled in kilometres per person per day (the b tables) and the average time (in minutes) spent travelling per person per day (the c tables) were rounded to the nearest hundredth of a unit.

The precision of the displays of the estimates was fixed at a given number of decimal places. The number of decimal places was chosen primarily to facilitate comparisons across rows and between columns, and between males and females. However, the precision displayed does not necessarily reflect the underlying accuracy of the estimates.

Given that the survey recorded data for 145 thousand trips, and there are an estimated 42 million trips in Australia each day, the average sampling fraction is about 1 in 300. This means that estimates of the total number of trips per day of about 300 are based on only one trip, and even estimates of about 2000 are probably based on only seven trips. Therefore, caution is necessary when interpreting low estimated numbers of trips and quantities based on them.

For a small proportion of survey respondents, some data items were missing. In general, the 'missing' column has been suppressed in the tables. The estimated total number of males and females excludes respondents with missing data for the item.

The 'totals' tables (tables d, e and f) in each section show the estimated total amount of travel in Australia for various categories of trips, the people who made them and the time and time they made them. For ease of comparison of rates of travel and as multipliers when estimating totals for subgroups of the tabulated categories, the 'per person' tables (tables a, b and c) in each section can be used.

## **2. Demographic variables**

- 2.1 Age group**
- 2.2 Highest educational level attained**
- 2.3 Country of birth**
- 2.4 Employment status**
- 2.5 Licensed car drivers**
- 2.6 Licensed motor cyclists**

## 2.1 Age group (Tables 2.1a to 2.1f)

The age groups tabulated are ages 9 to 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26 to 29, 30 to 59, 60 to 64, and 65 and over. These age groups were chosen because of the particular interest in crash rates for ages 16 to 25 in later work.

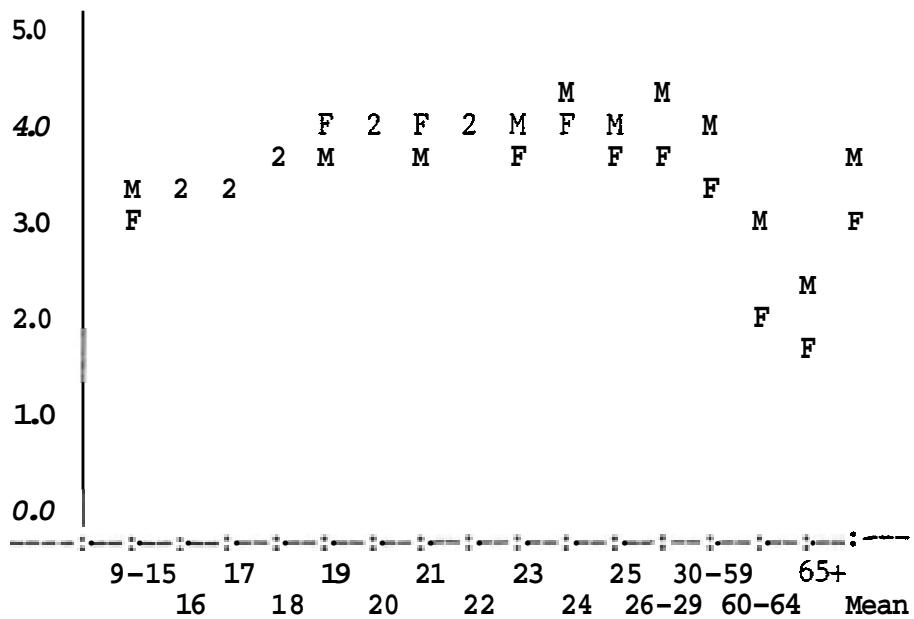

The average number of trips per person per day was 3.6 for males and 3.2 for females. The number of trips was greatest for persons in their twenties. The tables also include the population estimate (# males and # females), in thousands of persons, for each age group. These are the denominators for converting Tables 2.1d to 2.1f to Tables 2.1a to 2.1c.

The dominant mode of travel for adults is car driver, with this mode rapidly increasing from the mid-teens. Females have more trips as car passengers than males.

Males travel an average of 41 kilometres per day, whereas females travel an average of 28 kilometres per day. Children and teenagers travel less than adults.

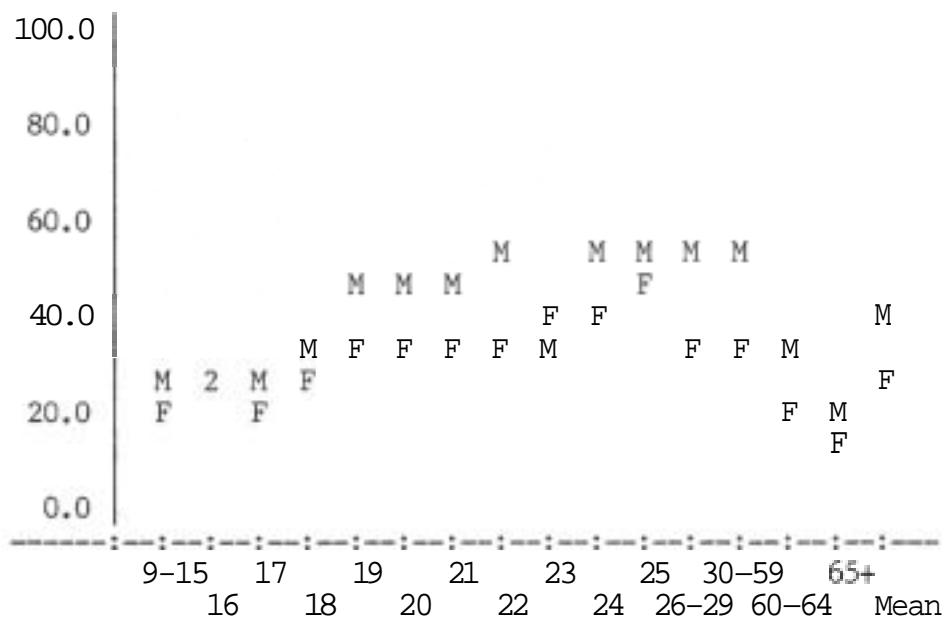

There were no missing data in these tables.

Figure 2.1a. Average number of trips per day per person, classified by sex and age group,

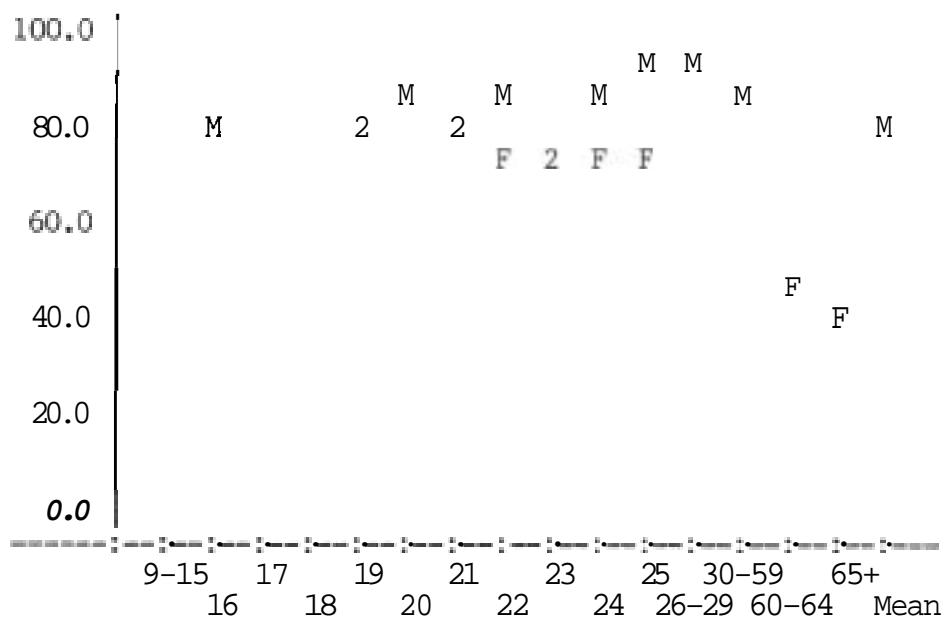

M = Males F = Females

Figure 2.1b. Average distance travelled (km) per day per person, classified by sex and age group.

M = Males F = Females

Figure 2.1c. Average time spent travelling (minutes) per day per person, classified by sex and age.

M = Males F = Females

## 2.2 Highest educational level attended (Tables 2.2a to 2.2f)

For these tables, highest educational attended was classified as primary, secondary or tertiary education. Persons with higher educational level attended travelled more, on average, than persons with lower educational level attended.

Note, however, that these tables include school children who have not completed their education. and who cannot be car drivers.

Highest educational qualifications were unknown for 1% of males (estimated 118 000 males in Australia) and 2.4% of females (estimated 153 000 females).

Figure 2.2a. Average number of trips per person per day, classified by sex and highest educational level.

M = Males F = Females

Figure 2.2b. Average distance travelled (km) per day per person, classified by sex and highest educational level.

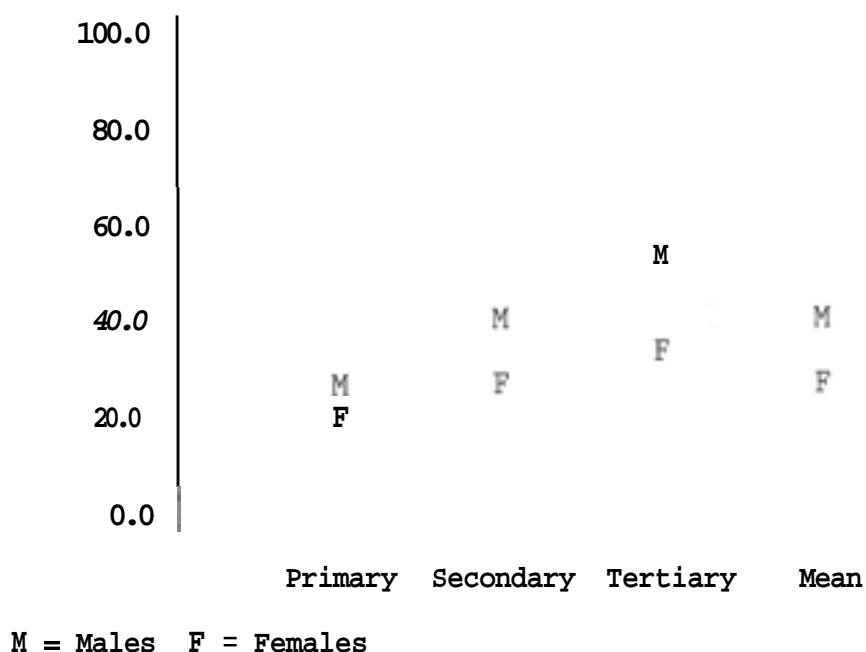

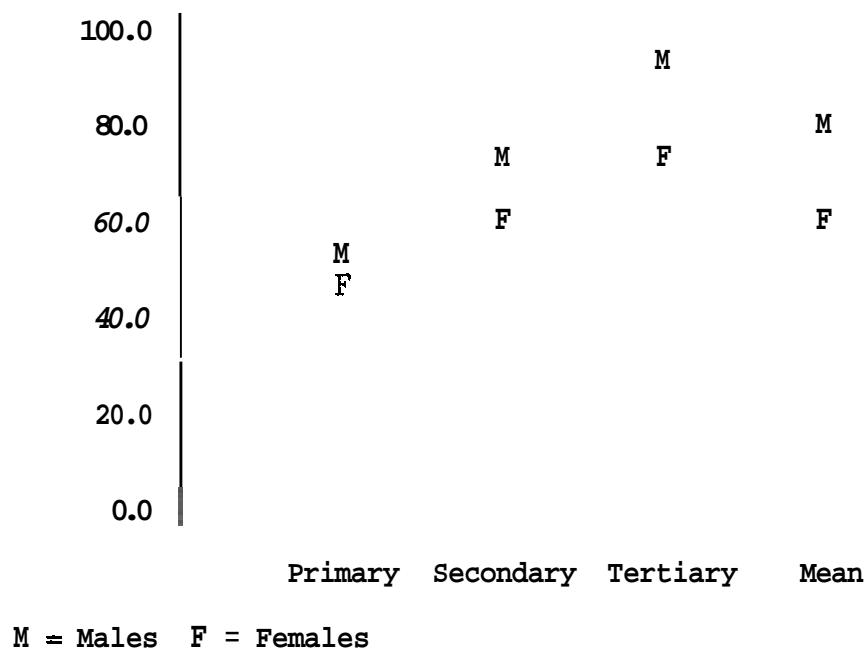

Figure 2.2c. Average time spent travelling (minutes) per day per person, classified by sex and highest educational level.

### 2.3 Country of birth (Tables 2.3a to 2.3f)

Country of birth was classified as Australia, United Kingdom and Ireland, New Zealand, Greece, Italy, Yugoslavia, Vietnam or other. There was considerable variation in travel for persons born in different countries. Persons born in English-speaking countries tended to travel more than other persons.

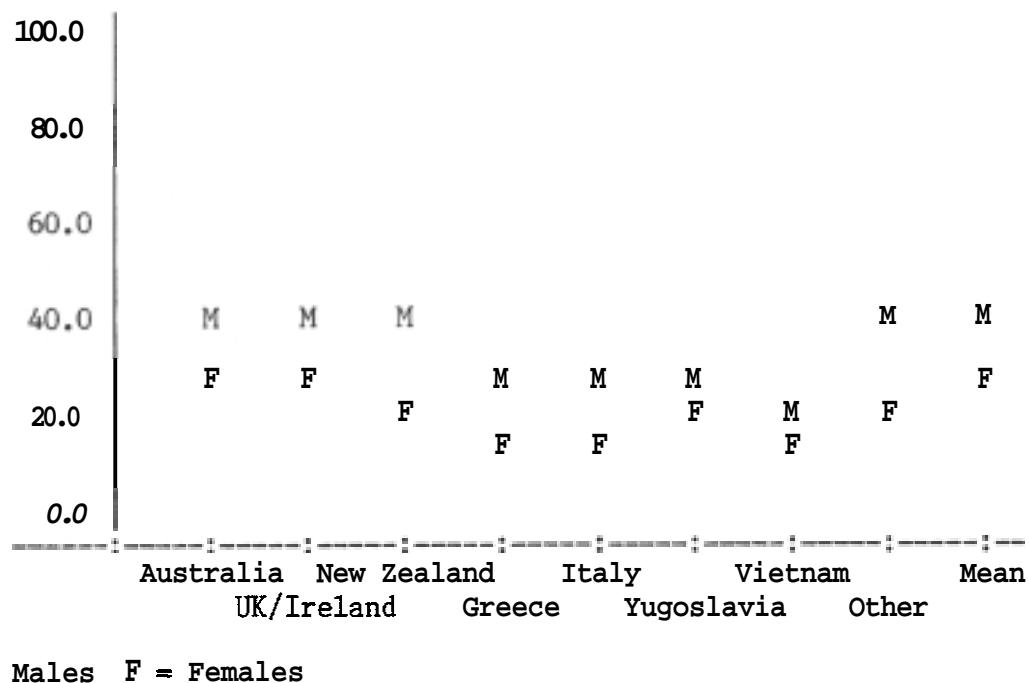

Country of birth was unavailable for 0.3% of males (estimated 19 000 males) and 0.4% of females (estimated 23 000 females).

Figure 2.3a. Average number of trips per day per person, classified by sex and country of birth.

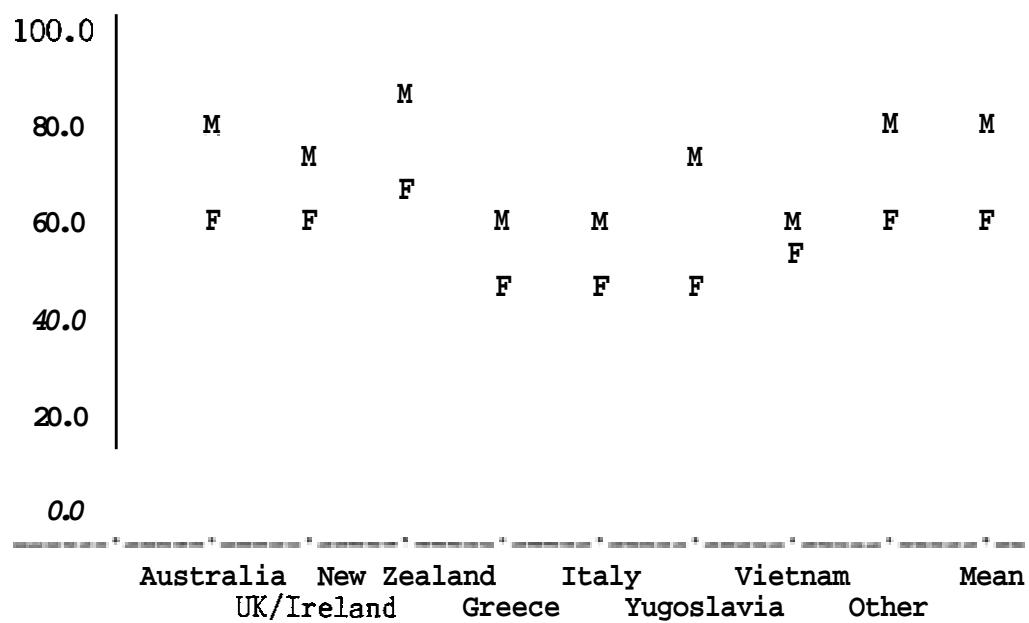

M = Males F = Females

## 2.4 Employment status (Tables 2.4a to 2.4f)

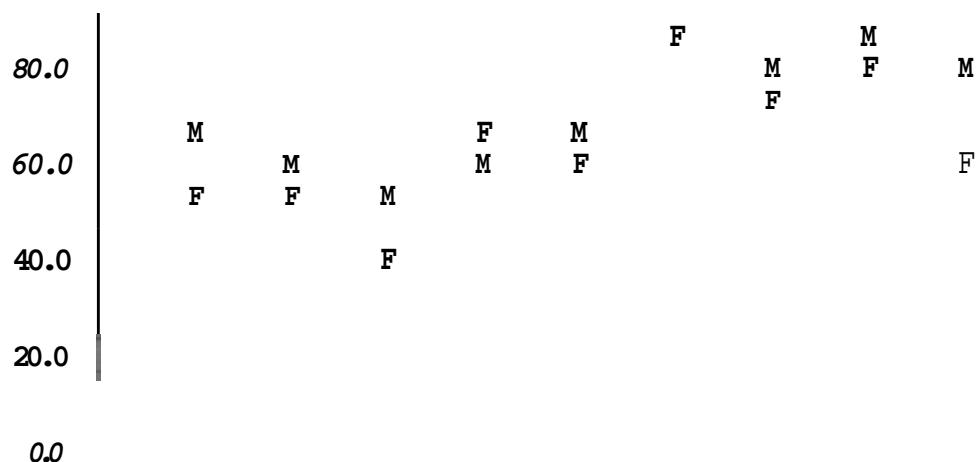

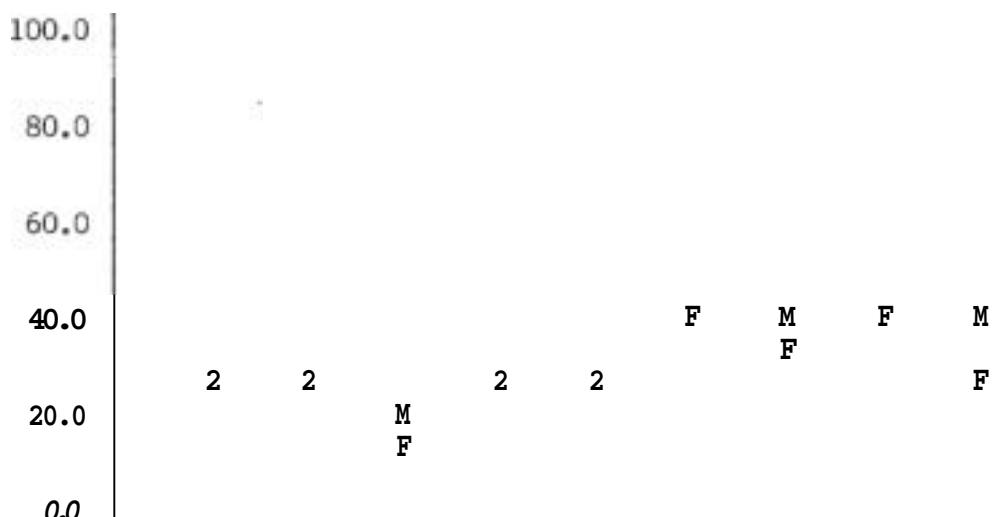

Employment status was classified into 8 categories, although these were not always mutually exclusive. Students and workers, especially those engaged in these activities part-time, had more trips on average than other categories of persons.

Because of the way employment status was collected, with individuals being able to be in several categories, the amount of missing data could not be estimated.

Figure 2.4a. Average number of trips per day per person, classified by sex and employment status.

**Figure 2.4b.** Average distance travelled (km) per day per person classified by sex and employment status.

1 = Home duties      2 = Looking for work      3 = Retired/Pensioner  
 4 = Other not employed      5 = Full-time student      6 = Fart-time student  
 7 = Part-time work      8 = Full-time work      9 = Mean

M = Males   F = Females

Table 2.4a. Average number of trips per day per person,  
classified by mode of travel, sex and employment status.

### **3. Time**

**3.1 Time of day**

**3.2 Day of the week**

**3.3 Season**

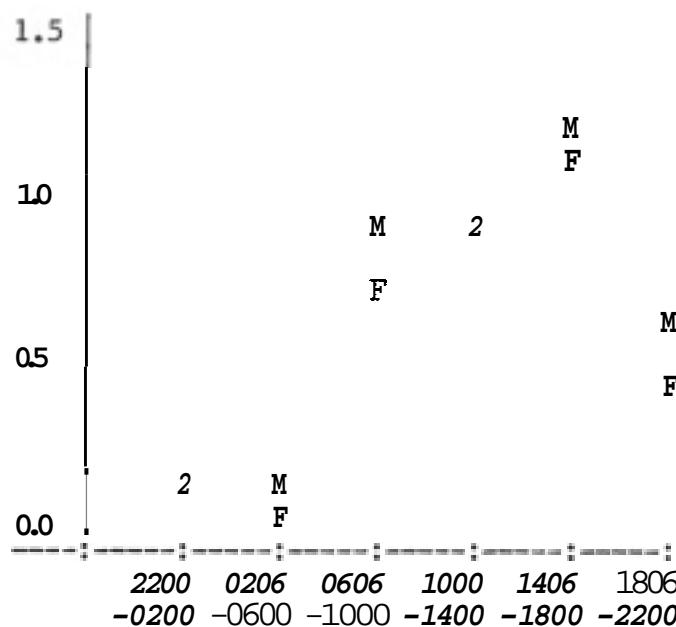

**3.4 Holiday periods**

### 3.1 Time of day (Tables 3.1a to 3.1f)

For these tables, time of day was divided into 4 hour periods. The period 2200 to 0200 was calculated by combining the periods 2200 to 2400 and 0000 to 0020, even though they relate to different days; this will overestimate the number of trip segments because trips that were in progress at midnight are counted twice. The average and total number of trip segments are necessarily greater than the number of trips because trips that occurred in two time periods are counted in each.

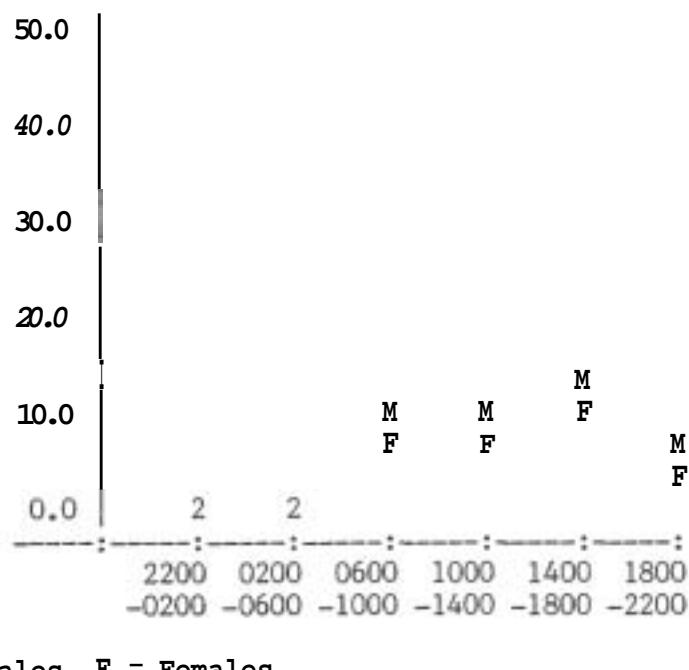

As expected, the periods with most travel are the daylight hours, with a peak at 1400 to 1800. Females had more travel between 1000 and 1400 than between 0600 and 1000, whereas the converse held for males.

Figure 3.1a. Average number of trip segments per person per day classified by sex and time of day.

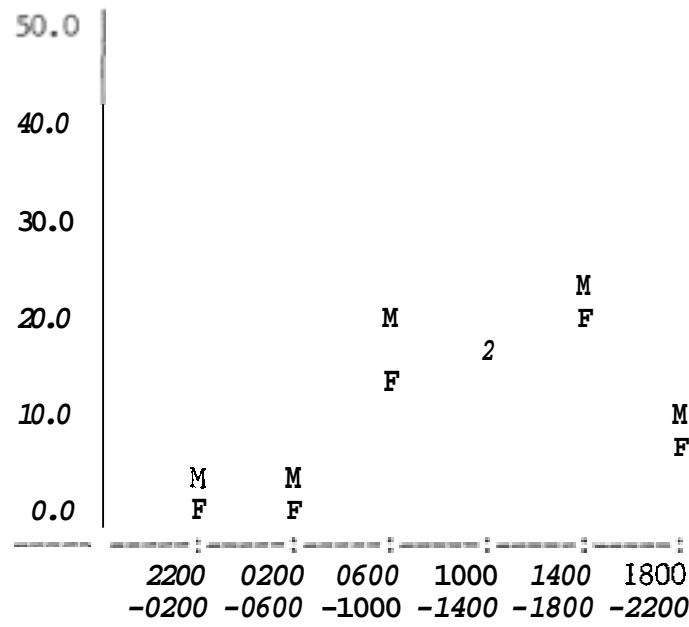

M = Males F = Females

**Figure 3.1b.** Average distance travelled (km) per person per day classified by sex and time of day.

M = Males F = Females

**Figure 3.1c.** Average time spent travelling (minutes) per person per day classified by sex and time of day.

M = Males F = Females

Table 3.1a. Average number of trip segments per person per day,  
classified by mode of travel, sex and time of day.

### 3.2 Day of the week (Tables 3.2a to 3.2f)

The average number of trips per day is fairly uniform from Monday to Thursday, with slightly more trips on Friday, and fewer trips on Saturday and the least number of trips on Sunday. However, the average distances travelled appear to be uniform for males, except for slightly longer average distances on Friday. For females, the average distance travelled per day was higher for Friday and Saturday than for Monday to Thursday, and was highest for Sunday.

Day of the week was missing for 0.01% (about 700) males and 0.01% (about 600) females.

M = Males F = Females

**Table 3.2a.** Average number of trips per day per person,  
classified by mode of travel, sex and day of the week.

### 3.3 Season (Tables 3.3a to 3.3f)

The number of trips, distance travelled and time spent travelling were similar for all four seasons, with slightly less travel in winter. The seasons were defined from the 1st of June (winter), September (spring), December (summer) and March (autumn).

The estimated total number of persons differs slightly from season to season. Although season was corrected for in the weights from the achieved sample to the desired sample, slight distortions occurred as a result of the later weighting steps.

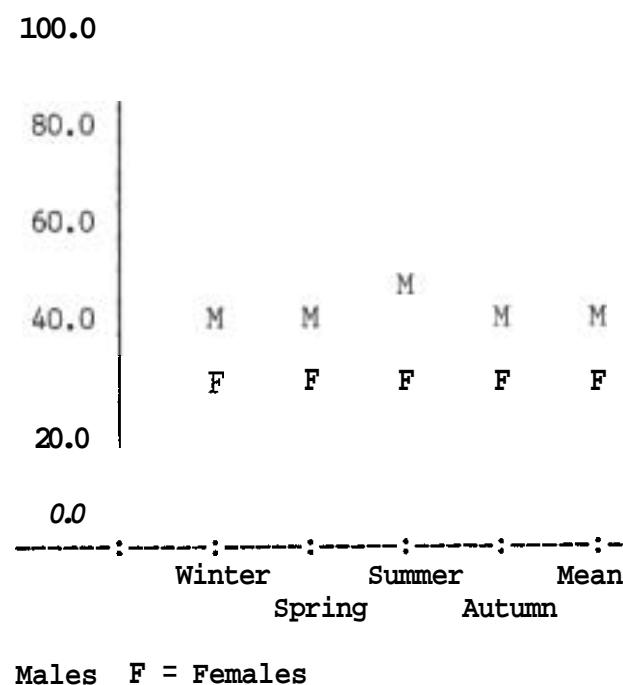

The amount of missing data was negligible (0.01% of persons).

Figure 3.3a. Average number of trips per day per person, classified by sex and season.

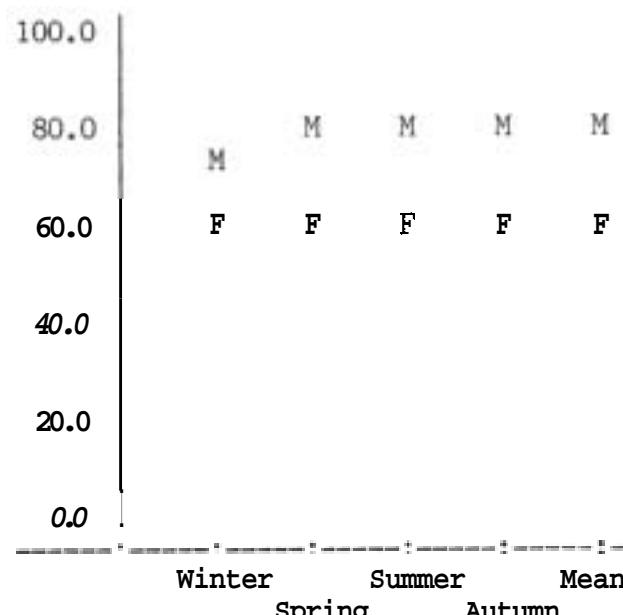

M = Males F = Females

**Figure 3.3b.** Average distance travelled (km) per day per person, classified by sex and season.

M = Males F = Females

### 3.4 Holiday periods (Tables 3.4a to 3.4f)

School holiday periods were separately determined for each State and Territory (Table 3.4). The Thursday before Easter was included in the Easter holiday period. Where holiday periods differed for government and Catholic schools, the dates used covered both types of schools. The last survey day was 27/08/86 (day 392).

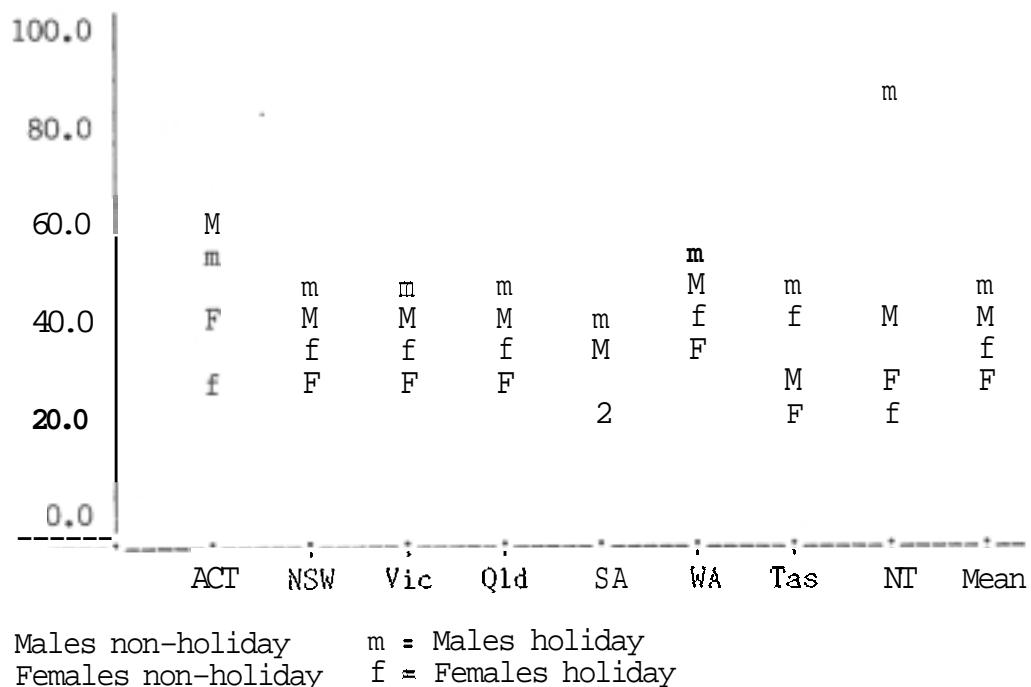

Fewer trips were made in holiday than non-holiday periods, although the average distance travelled and the time spent travelling was greater.

Figure 3.4a. Average number of trips per day per person, classified by sex, holiday period and state.

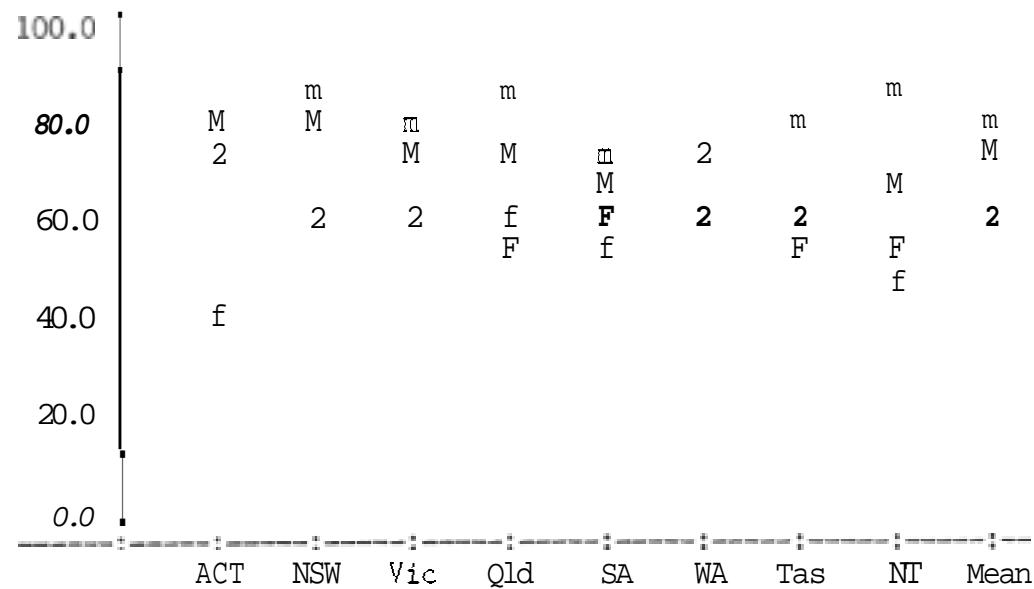

M = Males non-holiday      m = Males holiday  
F = Females non-holiday      f = Females holiday

Figure 3.4b. Average distance travelled (km) per day per person, classified by sex, holiday period and state.

#### 4. Regional variation

4.1 State or Territory

4.2 Capital city

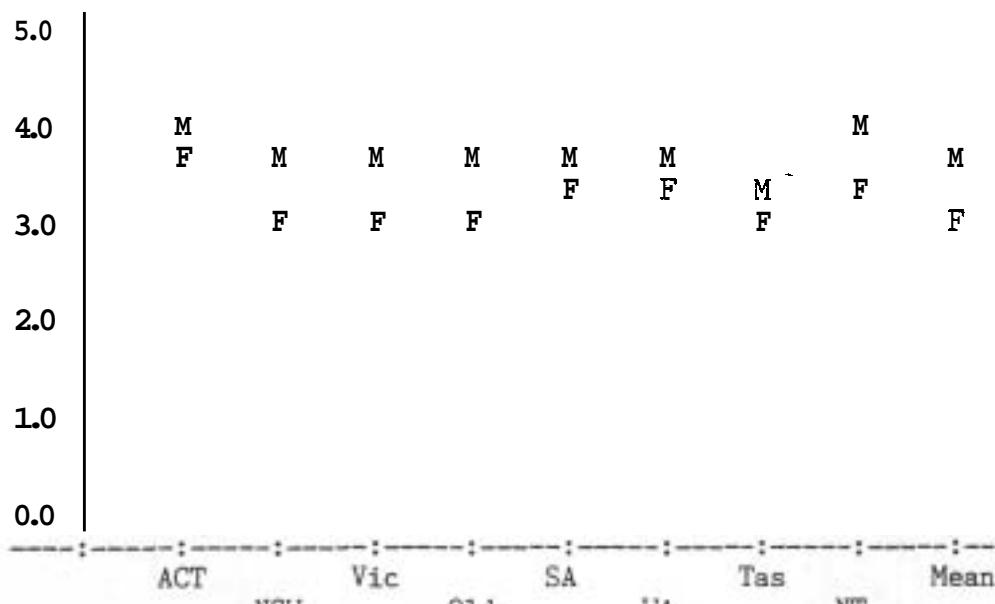

4.3 Rest of State or Territory (excluding capital city)

4.4 Sampled region

#### 41 State or Territory (Tables 4.1a to 4.1f)

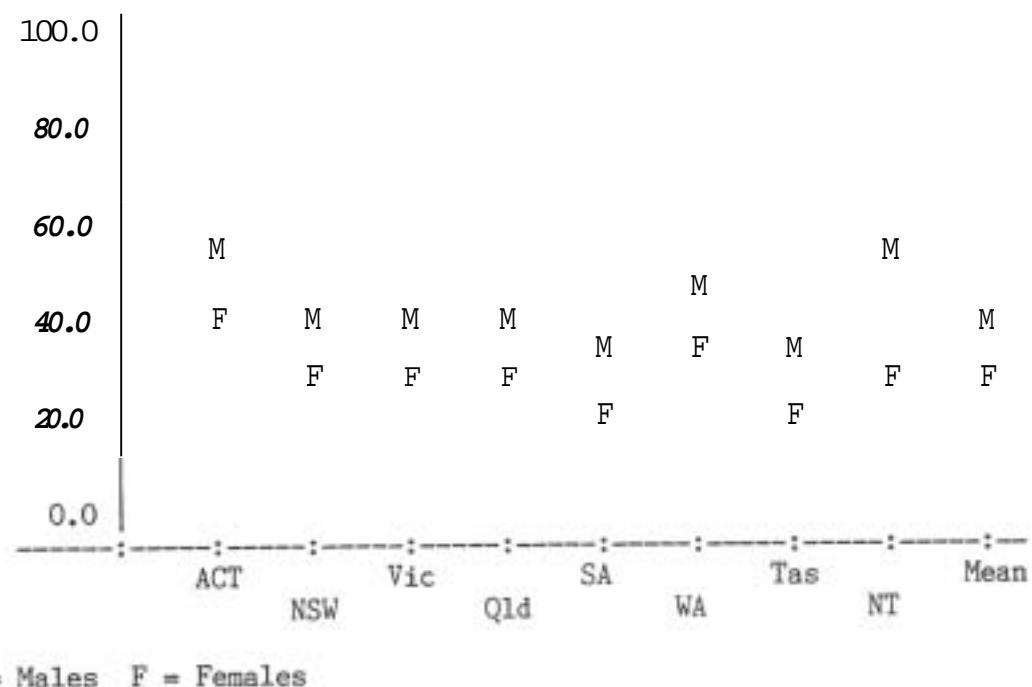

The average number of trips, distance travelled and time taken for each person in each State and Territory are given in Table 4.1a to 4.1c. The average number of trips per person is remarkably similar from State to State, with the longest average daily distances being for persons in the ACT and the Northern Territory, and the least distances for persons in Tasmania and South Australia.

Figure 4.1a. Average number of trips per day per person, classified by sex and state or territory.

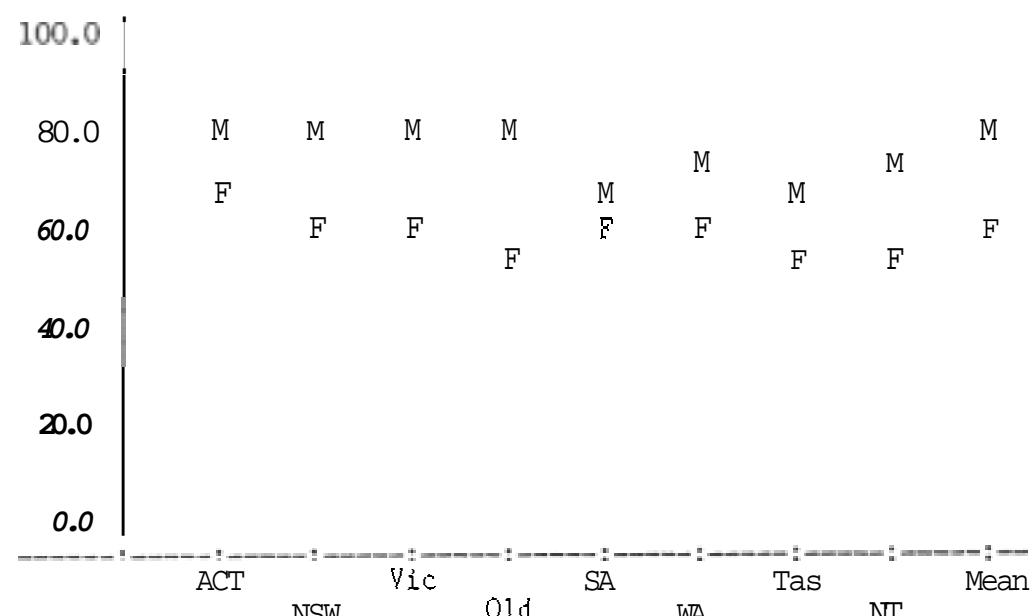

M = Males F = Females

Figure 4.1b. Average distance travelled (km) per day per person, classified by sex and state or territory.

M = Males F = Females

Figure 4.1c. Average time spent travelling (minutes) per day per person, classified by sex and state or territory.

M = Males F = Females

**Table 4.1a. Average number of trips per day per person,  
classified by mode of travel, sex and state or territory.**

#### 4.2 Capital city (Tables 4.2a to 4.2f)

The number of trips and time spent travelling per person is fairly uniform between the capital cities. Persons in Canberra travel further than persons elsewhere.

Figure 4.2a. Average number of trips per day per person, classified by sex and capital city.

M = Males F = Females

Figure 4.2b. Average distance travelled (km) per day per person, classified by sex and capital city.

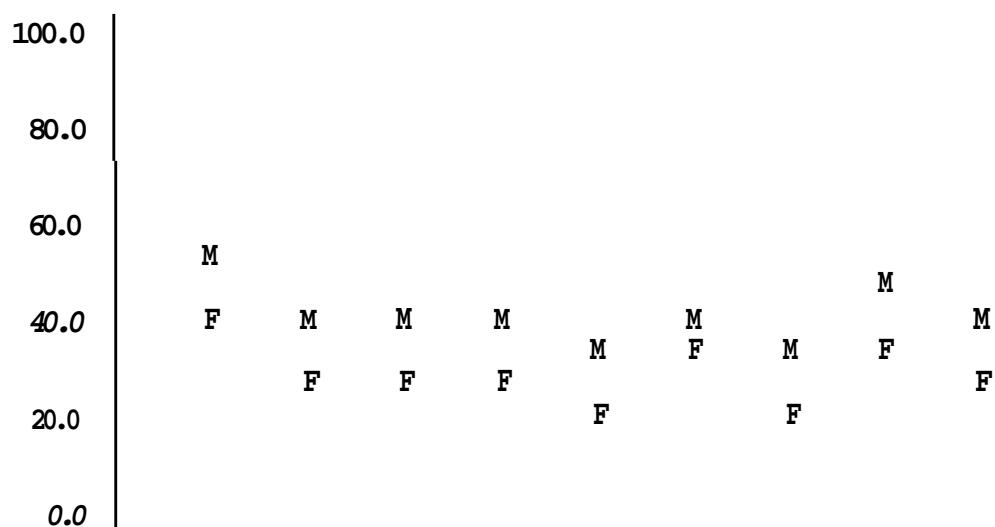

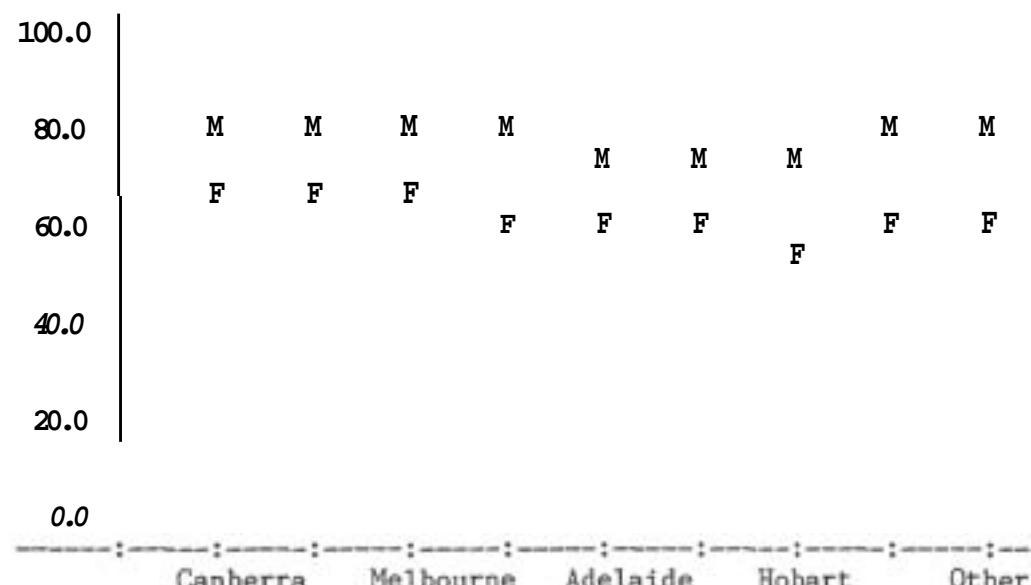

Figure 4.2c. Average time spent travelling (minutes) per day per person, classified by sex and capital city.

M = Males F = Females

#### 4.3 Rest of State or Territory (excluding capital city) (Tables 4.3a to 4.3f)

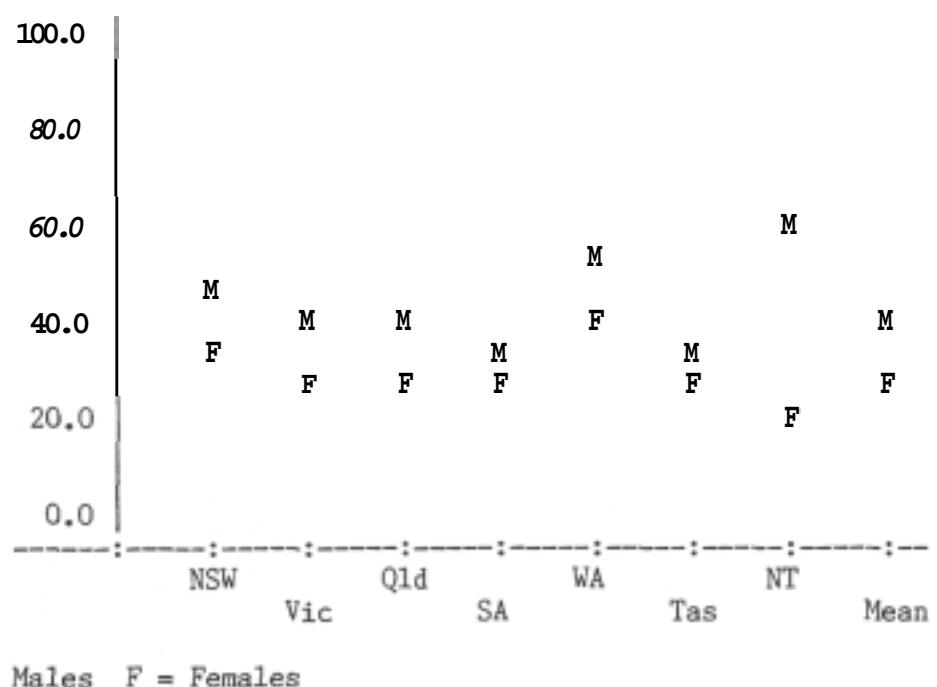

Table 4.3a to 4.3f summarise travel characteristics outside the capital cities. Comparison of these tables with those of Section 4.2 shows that although persons outside the capital cities tended to travel more on average than those who live elsewhere, this difference was small, and did not apply in all States.

Figure 4.3a. Average number of trips per day per person,  
classified by sex and rest of State or Territory.

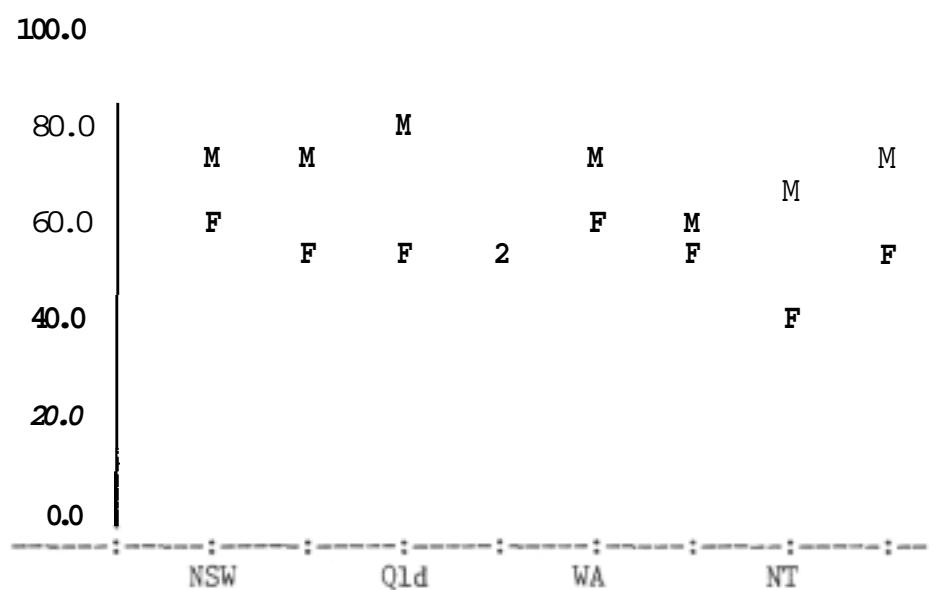

M = Males F = Females

**Figure 4.3b.** Average distance travelled (km) per day per person, classified by sex and rest of State or Territory.

M = Males F = Females

**Figure 4.3c.** Average time spent travelling (minutes) per day per person, classified by sex and rest of State or Territory.

M = Males F = Females

**Table 4.3a.** Average number of trips per day per person,  
classified by mode of travel, sex and rest of State or Territory,  
excluding the capital city.

#### 4.4 Sampled region (Tables 4.4a to 4.4f)

These tables use the weights to the sampled region rather than to the whole of Australia. The sampled regions were usually Statistical Divisions or Subdivisions. These tables could not employ the other weights because there is no well defined mapping from the detailed sampled regions to the rest of Australia, except via the aggregation of rest of State or Territory within each State or Territory. Further details of these regions can be found in SOCIALDATA (1987) or INTSTAT (1987).

Figure 4.4a. Average number of trips per day per person, classified by sex and region.

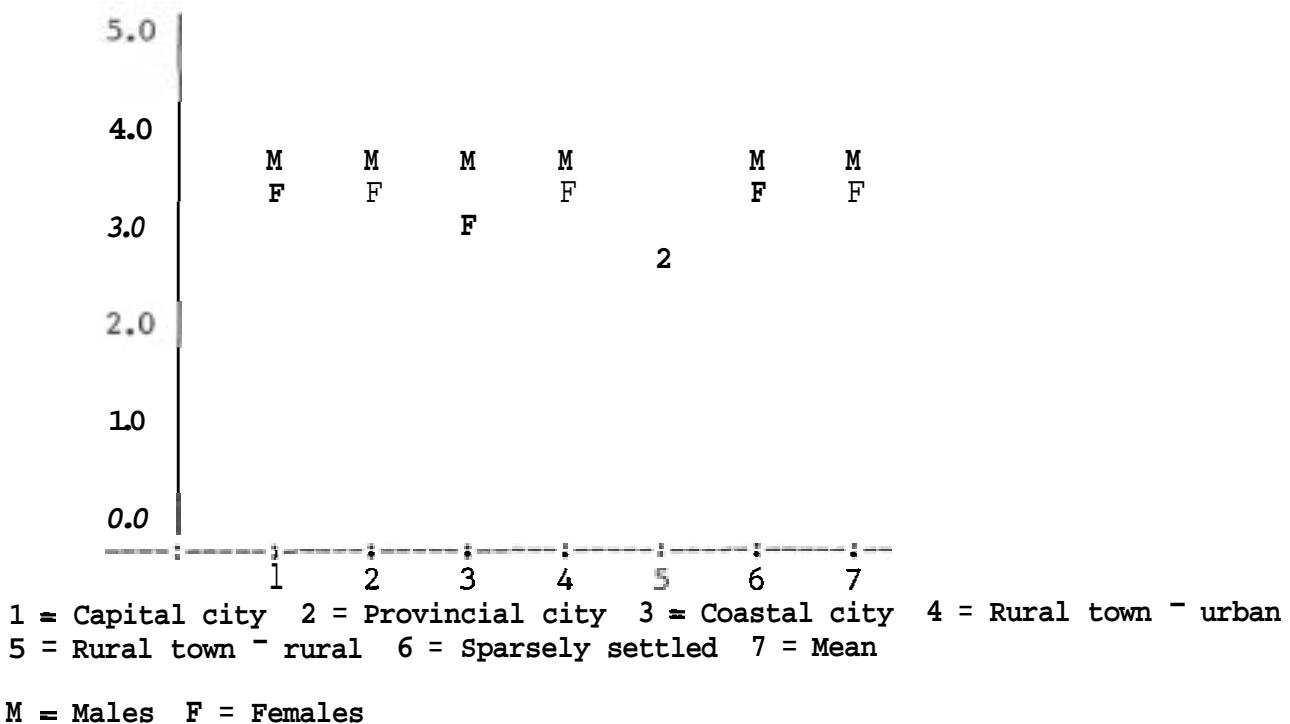

Figure 4.4b. Average distance travelled (km) per day per person, classified by sex and region.

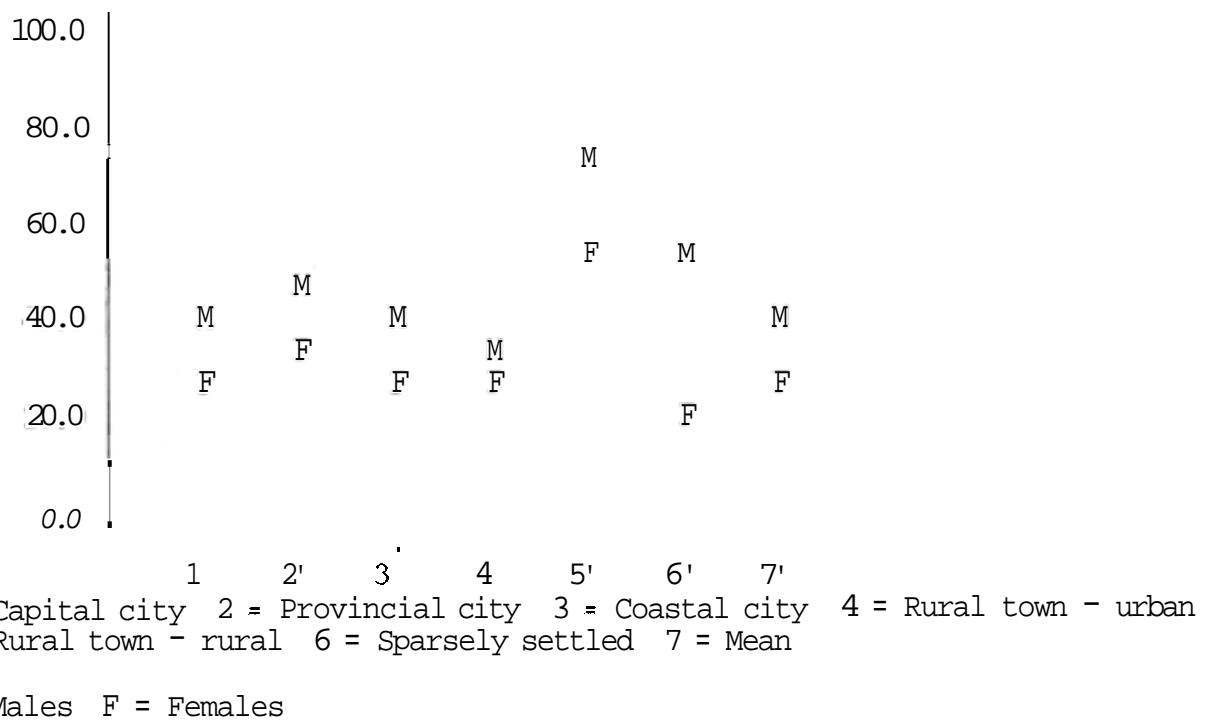

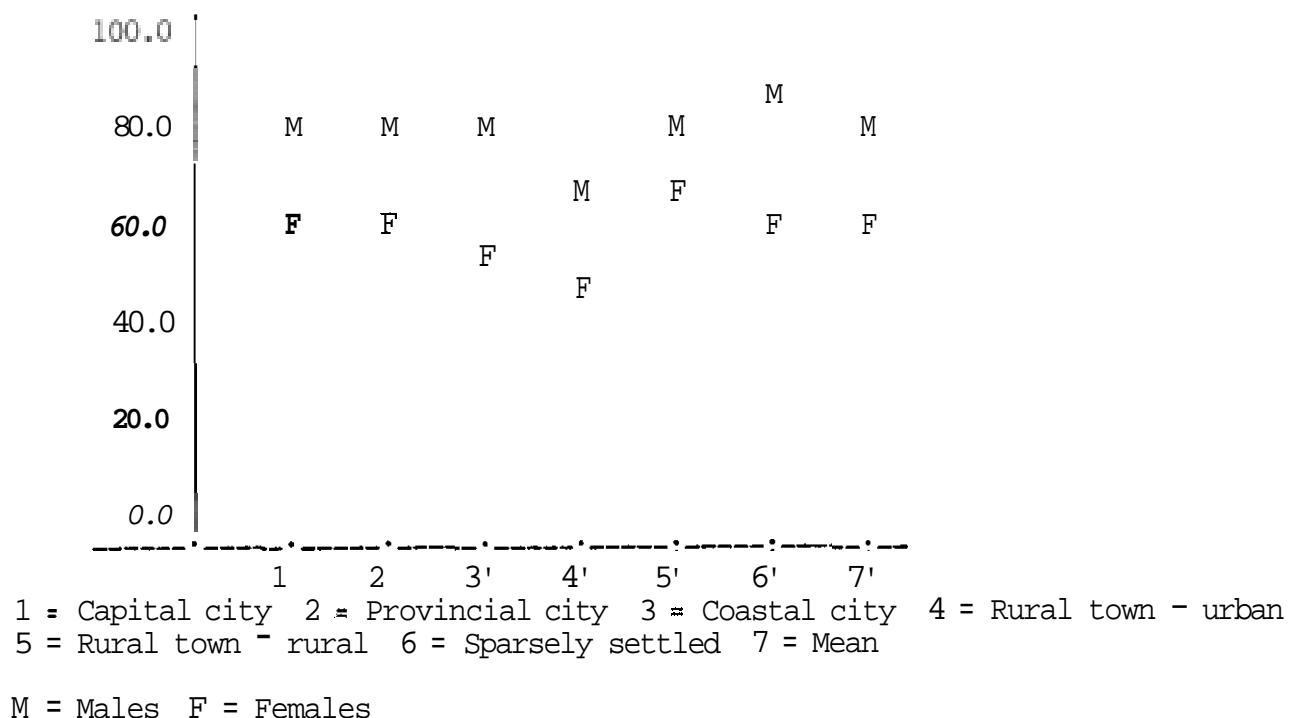

Figure 4.4c. Average time spent travelling (minutes) per day per person, classified by sex and region.

**Table 4.4a.** Average number of trips per day per person,  
classified by mode of travel, sex and region.

## **5. Trip characteristics**

**5.1 Trip purpose**

**5.2 Distance**

**5.3 Duration**

**5.4 Start times**

## 5.1 Trip purpose (Tables 5.1a to 5.1f)

Trips were classified according to 14 mutually exclusive trip purposes. Unclassified trips comprised 5% of trips by males and 6% of trips by females.

The main trip purpose was returning home, since such a trip would typically follow each trip leaving home. It is possible that some survey respondents reported combined trips to and from a destination under the trip purpose of the destination, and so the percentage of trips home is probably underestimated (SOCIALDATA, 1987).

As expected, men were more likely than women to be going to work, while women were more likely than men to be shopping, picking-up or dropping-off others, or visiting.

Table 5.1a. Percentage distribution of main trip purpose for trips made by males.

## 5.2 Distance (Tables 5.2a to 5.2b)

These tables show the number and percentage distributions for the distance of trips in Australia.

Most trips are short: 55% of trips by males and 61% of those by females are for 5 kilometres or less.

One anomaly is that some walking trips are nominally for more than 50 kilometres. The main reason for this occurring will be the algorithm for splitting multi-mode trips into their component modes (SOCIALDATA, 1987). For multi-mode trips with an average speed faster than the average of all single mode trips for the fastest mode, the time spent and distance travelled for the slower modes will be overestimated.

Trip distance was unavailable for 0.9% of trips by males and for 1.0% of trips by females.

Figure 5.19 Percentage distribution of trip instances for trips by males.

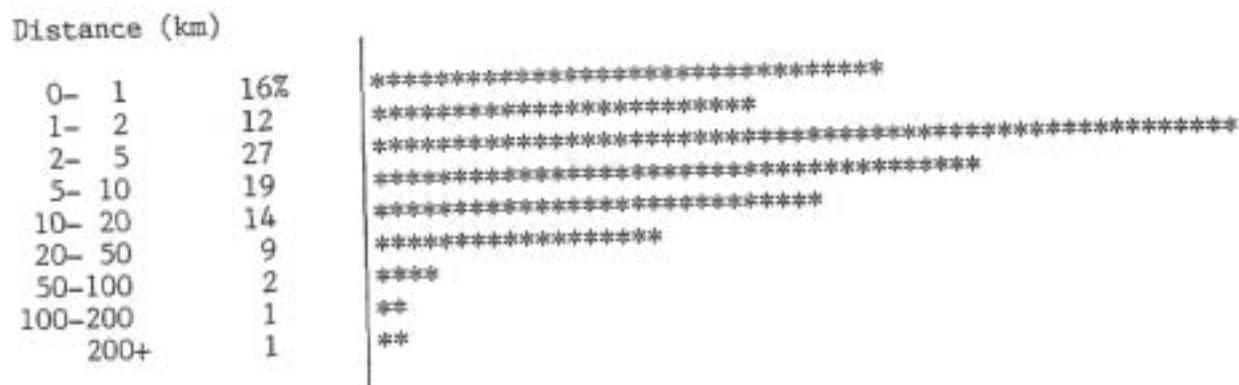

Figure 5.20 Percentage distribution of trip distances for trips by females.

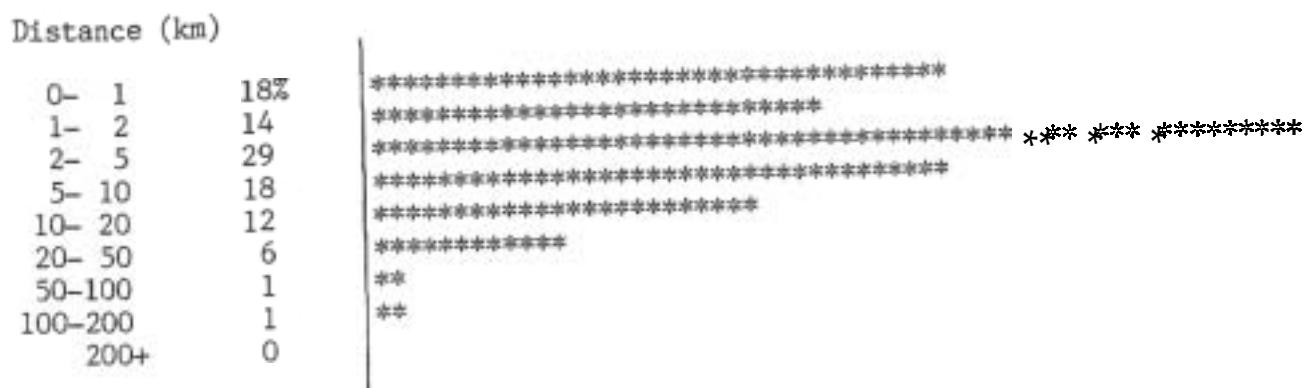

Table 5.2a. Number of trips (in '000) in Australia,  
classified by mode of travel, sex and distance of trip.

6. Age and time of day

- 6.1 Travel by car as a driver
- 6.2 Travel by car as a passenger
- 6.3 Travel by motor cycle
- 6.4 Travel as a pedestrian
- 6.5 Travel by bicycle

## 6.1 Travel by car as a driver (Tables 6.1a to 6.1f)

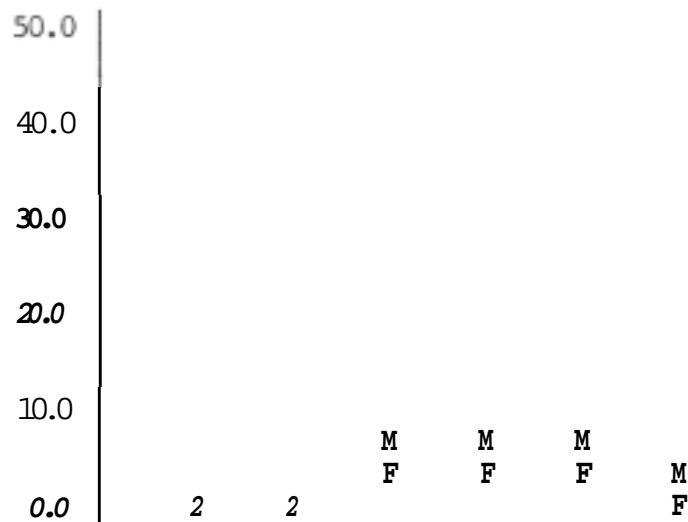

Tables 6.1a to 6.1f summarise travel by car as a driver, classified by sex, age group and time of day.

**Figure 6.1a. Travel by car as a driver:**  
Average number of trips per person per day,  
classified by sex and time of day.

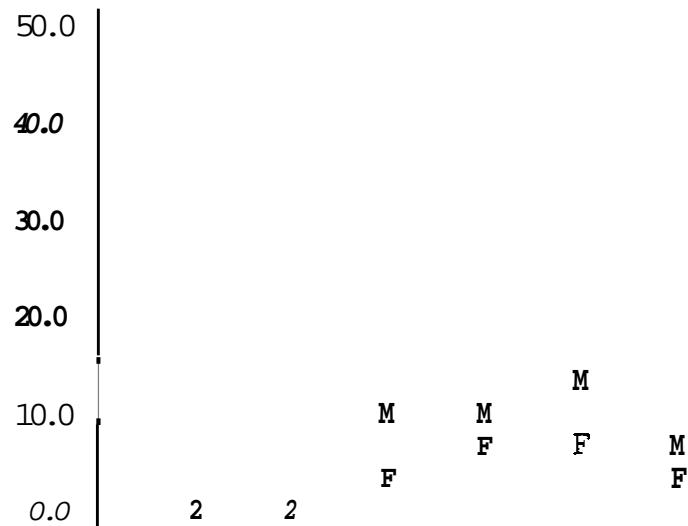

M = Males F = Females

**Figure 6.1b.** Travel by car as a driver:  
Average distance travelled (km) per person per day,  
classified by sex and time of day.

M = Males F = Females

**Figure 6.1c.** Travel by car as a driver:  
Average time spent travelling (minutes) per person per day,  
classified by sex and time of day.

M = Males F = Females

Table 6.1a. Car drivers:

Average number of trip segments per person per day  
classified by age, sex and time of day.

## 6.2 Travel by car as a passenger (Tables 6.2a to 6.2f)

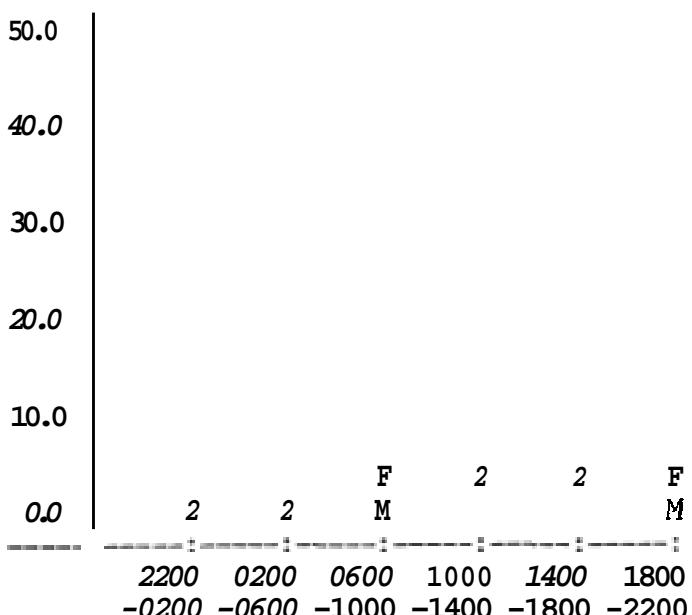

Tables 6.2a to 6.2f summarise travel by car as a passenger, classified by sex, age group and time of day.

**Figure 6.2a. Car passengers:**  
Average number of trips per person per day,  
classified by sex and time of day.

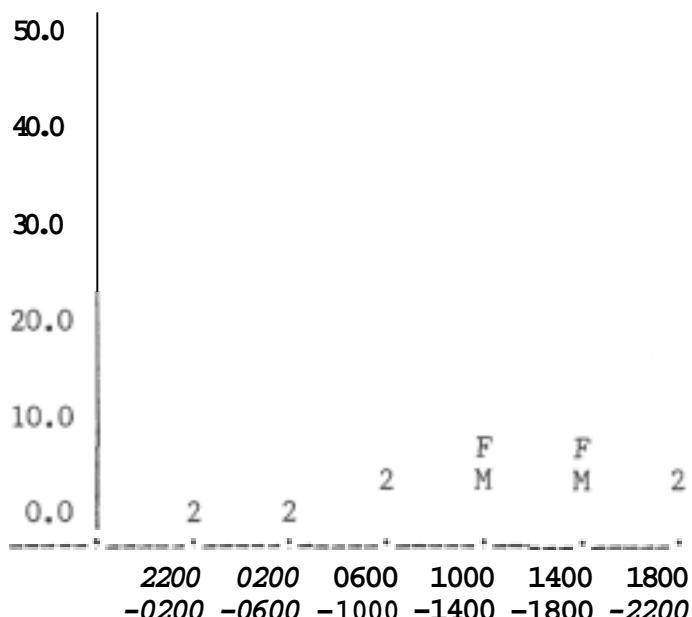

M = Males F = Females

**Figure 6.2b. Car passengers:**  
 Average distance travelled (km) per person per day,  
 classified by sex and time of day.

M = Males F = Females

**Figure 6.2c. Car passengers:**  
 Average time spent travelling (minutes) per person per day,  
 classified by sex and time of day.

M = Males F = Females

Table 6.2a. Car passengers:

Average number of trip segments per person per day  
classified by age, sex and time of day.

#### 6.4 Travel as a pedestrian (Tables 6.4a to 6.4f)

Tables 6.4a to 6.4f summarise travel as a pedestrian, classified by sex, age group and time of day.

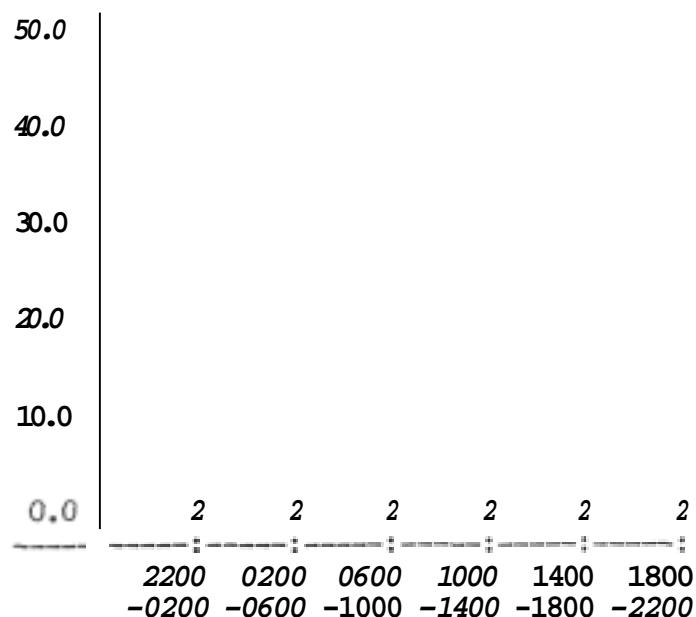

**Figure 6.4a. Travel as a pedestrian:**  
Average number of trips per person per day,  
classified by sex and time of day.

M = Males F = Females

**Figure 6.4b. Pedestrians:**

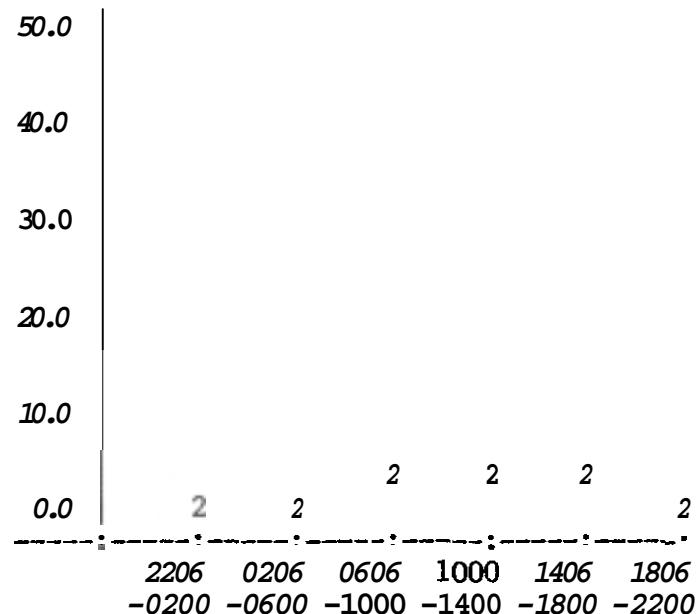

Average distance travelled (km) per person per day,  
classified by sex and time of day.

M = Males F = Females

**Figure 6.4c. Pedestrians:**

Average time spent travelling (minutes) per person per day,  
classified by sex and time of day.

M = Males F = Females

**Table 6.4a. Pedestrians:**  
 Average number of trip segments per person per day  
 classified by age, sex and time of day.

## APPENDIX

### EXPLANATION OF WEIGHTS USED TO CREATE THE TABLES

The weights used to create the tables were generated from PWEIGHT1 and PWEIGHT2, described in 'Review of exposure data base from the Survey of Day-to-Day Travel in Australia 1985-86' (INSTAT 1987). PWEIGHT2 was the weight used to ensure the correct baseline population for the tables for most of the tabulations in the person survey file.

However, there were a few exceptions to this. Firstly, those tables which were classified by region (Tables 4.4a to 4.4f) used PWEIGHT1. Secondly, those tables which were classified by day of week (Tables 3.2a to 3.2f) or season (Tables 3.3a to 3.3f) used PWEIGHT2 multiplied by 7 or 4, respectively. Finally, those tables which were classified by holiday and non-holiday periods (Tables 3.4a to 3.4f) used:

PWEIGHT2 \* #(days sampled) / #(days in holiday period)

and

PWEIGHT2 \* #(days sampled) / #(days in non-holiday period),

as appropriate.

Total number of trips, distance and time tabulations were calculated from the data base using XTABS. These tables were printed and entered into a spreadsheet program on a microcomputer for reformatting into the d, e and f tables in each section. Where the weights were simple multiples of PWEIGHT2, these multiples were applied by the spreadsheet program, rather than in XTABS. The 'per person' tables (the a, b and c tables in each section) were calculated and formatted using the spreadsheet program.

In the following paragraphs, the methods used for weighting based on PWEIGHT2 are described. The weights based on PWEIGHT1 were calculated similarly. Since the survey files use -1 as the default missing value, allowances had to be made for this in the APL code.

Variables for the weights were implemented as pseudo fields in MABRA, and added as weights within XTABS. An example of the MABRA code to create a pseudo field, PDISTWT1, is:

```
02:ap
★ add pseudo field
★ enter field name: pdistwt1
★ type? (char/inte/real/bina/date) : real
★ number of elements in field: 1
★ use default output format? (y/n): y
★ enter expression defining field
:(;b+dist>0)xpweight1xdist÷10
★ retain this field? (y/n): n
★ ok to add field? (y/n): y
★ pseudo field added.
```

For each pseudo field, only the expression defining the field is given.

#### Total number of trips

When the person survey file was linked to the trip mode survey file and PWEIGHT2 was used as the weight for tabulations, the resulting tables estimated the total number of trips, using each mode, per day in Australia.

PWEIGHT2 is already present on the person survey file, so no additional APL code was required.

#### Total distance travelled

To calculate the number of kilometres travelled, using each mode, in Australia per day, PWEIGHT2 was multiplied by one tenth of the distance of the trip (since the distance was measured in hectometres) and the result (PDISTWT2) was used as the weight for tabulations. The trip distance used was that given in the trip mode survey file, as calculated by SOCIALDATA (1987).

The APL code for PDISTWT2 is:

```
pdistwt2 <- (tb+dist>0) xpweight2xdist÷10
```

#### Total time spent travelling

To calculate the number of minutes spent travelling, using each mode, in Australia per day, PWEIGHT2 was multiplied by the duration of the trip and the result (PDURWT2) was used as the weight for tabulations. The trip duration used was that given in the trip mode survey file, as calculated by SOCIALDATA (1987).

The APL code for PDURWT2 is:

```
pdurwt2 <- (tb+duration>0) xpweight2xduration
```

#### Time of day

The weights used to produce the time of day tables (Tables 3.1a to 3.1f, 6.1a to 6.5f) were more complex to calculate and required intermediate steps. The day (the 24 hour period of the travel day) was divided into 7 time periods (0000-0200, 0200-0600, 0600-1000, 1000-1400, 1400-1800, 1800-2200 and 2200-2400). Separate weights had to be calculated for each of these time periods. Since the calculations for each of the time periods were similar, the time period 0200-0600 is used as an example of the steps required to calculate the weights.

Before any weights could be calculated, the number of minutes spent travelling between 0200 and 0600 had to be calculated for each trip. The start time and duration given in the trip survey file were used for this calculation. This uses the assumption that each trip mode of the trip was spread over the whole trip. Since the start time for trips was given in the survey file as a single integer in hours and minutes (ie 0200 corresponds to 2 am) and the duration was given as minutes, the start time had to be converted into minutes. This required the definition of intermediate pseudo-variables. The definitions are:

```
trpsth <- ⌊trpst÷100
trpstm <- 100!trpst
mtrpst <- (7^1 x^~b)+(7b+(trpst≥0))×trpstm+trpsth×60
```

The trip end time (also in minutes) was then calculated.

```
mtrpend <- (7^1 x^~b)+(7b+(trpst≥0)∧(trpdur≥0))×mtrpst+trpdur
```

To calculate the number of minutes spent travelling between 0200 and 0600 for a trip, the following logic was used:

```
if start-time < 120 (minutes) then start-time = 120
if end-time > 360 (minutes) then end_time = 360

calculate PERDURZ = end-time - start-time

if PERDURZ > 0 then PERDURZ = PERDURZ
else PERDUR2 = 0
```

The corresponding APL code is:

```
trpst2 <- (7120 x^~b)+(7b+(mtrpst<0)∨(mtrpst≥120))×mtrpst
trpend2 <- (7360 x^~b)+(7b+mtrpend≤360)×mtrpend
perdurz <- (7b+(trpst2≥0)∧(trpend2≥0))×trpend2-trpst2
perdur2 <- (7b+perdurz>0)×perdurz
```

The weight for the number of trip segments between 0200 and 0600 was calculated as follows. If the number of minutes spent travelling in the time period (PERDUR2) was positive then the trip was given a weight of PWEIGHT2, otherwise it was given a weight of 0. The APL code for P2TRPWT is:

```
p2trpwt <- (7b+perdur2>0)×pweight2
```

To calculate the number of kilometres travelled between 0200 and 0600, PDISTWT2 needed to be multiplied by the proportion of the trip which was travelled between 0200 and 0600. This follows from the assumption that each trip mode of the trip was spread over the whole trip.

The APL code for the result (P2DISTWT) is:

```
p2distwt <- (tb+(dist>0) ∧ (trpdur>0)) xpweight2 × (dist+10) × perdur2 ÷ trpdur
```

The weight for the number of minutes spent travelling between 0200 and 0600 (P2DURWT) was calculated similarly:

```
p2durwt <- (tb+(duration>0) ∧ (trpdur>0)) xpweight2 × duration × perdur2 ÷ trpdur
```
