

Communication and Safety at Sea

- Waterproof to 15m**
- Easily deployed antenna**
- Flotation pouch included****
and can be retracted from the water.

In an emergency **rescueME PLB1** provides 3 methods of communicating your location ensuring maximum chance of survival.

- 406 MHz** Link via satellite to Emergency Services
- 121.5 MHz** Homing Beacon to aid final location by Search and Rescue craft
- High intensity (1 candela) strobe**

Wherever you are at sea or on land, the **rescueME PLB1** provides the reassurance that emergency services can be alerted by the press of a button.

rescueME PLB1 works with the only officially recognised worldwide dedicated search and rescue satellite network (operated by Cospas Sarsat). As this is funded by governments there are NO CHARGES to use this service.

When activated, the **rescueME PLB1** transmits your position and your unique ID to a Rescue Coordination Centre via satellite link. Rescue services are promptly notified of your emergency and regularly advised of your current location.

To assist with search and rescue, a homing signal is transmitted on 121.5MHz, which is received by equipment fitted to sea and airborne rescue craft.

**The PLB1 is not designed and intended for operation while immersed in water. The PLB1 has a flotation pouch which allows it to be kept above the water.
